

Planter Boxes: It's not just about the plants

Roots had penetrated existing waterproof membrane.

Challenges

- Determining the most cost-effective solution for strata owners and occupants.
- Ensuring the solution is long-term – not some quick fix.
- Identifying the key priority and starting point - the main planter boxes were a good start.

Nearing completion – ready to add plants.

Project:

Medium Density - Parramatta

Key Objectives

- Ensuring there is an effective long term waterproofing solution for planter boxes to avoid efflorescence (calcium carbonate deposits).
- Protecting the building from long term effects of failed waterproofing.
- Looking for the solution that is in the best interests of both the owners and occupants.

The planter box ready for re-waterproofing.

Siga Solutions

- Detailed documentation confirming the need for the required waterproofing upgrade.
- Ensuring that the works were guaranteed for 10 years in any contract.
- Monitoring the progress of the works.

Zachary's Joke:

Q - What kind of cake do you eat at a horror movie?

A – An I scream cake!

Zachary Simone – 13 years old – hopes you enjoy this!
