Getting the job done – on time

Project:

Industrial – Campbelltown

Key Objectives

- As the client had already encountered considerable delays along the way, it was vital that Siga completed the structural detailing as quickly and efficiently as possible.

Challenges

- Due to the ongoing delays, we just needed to get on with it for the client.
- Preparing the structural details in advance of the final working drawings to facilitate building approval and commencement of construction.

The finished product

Siga Solutions

- Siga designed and documented the structural steel to the main roofs and mezzanines, the structural concrete to the footings, piers, mezzanine floors, tilt up panels, as well as external and internal concrete paving.
- Siga also provided site inspections and structural certification for the construction component of this project.

Chloe's Joke:

Q – Why do the French eat snails?

A – Because they don't like fast foods!

Chloe Simone – 8 years old – hopes you enjoy this joke.
